## SANDSTONE PORCELAIN

### The Sandstone Porcelain Tile

The Sandstone series of glazed porcelain tiles has been developed mainly with a 'flat and non-slip' surface factor in mind, this for areas where a combination of non-slip and smooth surface is of preference. With a Natural Sandstone surface appearance, its textured matt surface has optimum non-slip and wear rating.

Due to the special manufacturing process, these non-slip tiles have a rougher surface than other general glazed tiles, thus requiring additional attention when cleaning. Light colours, such as the White and Silver are more sensitive to this, especially in medium to heavy traffic commercial areas or where soiling is of main concern. For strict surface rating requirement, please enquire within as results may vary between colours and batches. These glazed tiles are best suited for medium traffic areas.

With such high product performance, these tiles are particularly suitable for external application where aesthetic appeal is a must.

### APPLICATIONS:

- Internal/External surfaces – wall and floor\*
- 150x150 tiles available for extra non-slip performance

### PRODUCT DATA:

- Sandstone Porcelain is manufactured in 10mm
- Surface Rating – Non-slip: R11 and X; PEI: Class 4
- Available in 6 standard colours; Classification V3
- Sizes available in 600x600mm, 300x600mm, 300x300mm, 150x150mm and mosaic \*
- Available in a textured Matt glazed surface only
- Glazed porcelain tile
- Refer to catalogue for standard range of products illustration
